

AN AI CHIEF OF STAFF FOR STARTUPS

Evergreen

“An AI room that owns an outcome — for the life of the outcome.”

THE PROBLEM

Most AI agents are vending machines.

ONE - SHOT AGENT

ALWAYS - ON

The biggest losses happen in the gaps, where nobody is watching: the account quietly churning, the competitor move caught too late.

THE SHIFT

Don't give it a task. Give it an outcome to own.

01

Persistent

Stays on duty around one outcome — it never clocks off.

02

Event-driven

Sleeps until a watcher reports something worth waking for.

03

Institutional memory

Remembers why it did everything, indefinitely.

Delete the clock and the memory and it's just a pipeline — that's the test it must pass.

```
duddu >> MARKET_WATCHER_MODE=scripted uv run python -m agents.watchers.market_watcher

event fires → wakes

WHAT WE BUILT

A Startup Operating System.

A persistent AI room assigned one outcome: keep the company (**Quillo**, a fictional SaaS form builder) healthy and growing.

It watches, wakes, convenes specialists, escalates to the founder, and remembers.

Finance

@Orchestrator

Quillo has experienced a drop in MRR from \$49,055 to \$43,509, representing a loss of \$5,546 monthly. This decline necessitates immediate focus on customer retention strategies and enhanced marketing efforts to regain lost revenue, given our burn rate of \$62,000/month and a runway of around 12 months.

11:01:39.914 UTC ✓ 1

Orchestrator

@Competitive Analysis

Typeform has announced a 30% price cut on their Starter plan and introduced a new AI form-building feature. Please assess the competitive threat and provide recommendations.

11:01:42.348 UTC ✓ 1

Competitive Analysis

@Orchestrator

Typeform announced a 30% price cut on their Starter plan and launched a new AI form-building feature targeting SMBs and non-technical operators. Threat level is high due to the attractive pricing and enhanced functionality directly competing with Quillo. Our likely exposure is in the Starter plan users, which could impact a significant portion of our user base. I recommend we enhance our marketing of the unique strengths of Quillo, particularly in user-friendliness and customer support, and consider temporary promotional pricing to retain our current users and attract new ones.

the single founder brief

Orchestrator

@Dinesh Sai Rayapati

We've received insights from our specialists regarding the current challenges:

1. **MRR Drop:** We've experienced a significant MRR drop of \$5,546, necessitating immediate focus on customer retention and marketing efforts.

2. **Churn Risk:** There's a 4.5% monthly churn risk in the Starter plan, affecting 871 customers and risking ~\$745 MRR. A targeted re-engagement campaign with incentives is recommended.

3. **Competitive Threat:** Typeform's 30% price cut and new AI feature pose a high threat, especially to our Starter plan users. It's advised to enhance marketing of Quillo's unique strengths and consider temporary promotional pricing.

Recommendation: Implement a targeted re-engagement campaign with incentives for the Starter plan users, enhance marketing efforts focusing on Quillo's user-friendliness and customer support, and consider temporary promotional pricing to retain and attract users.

Please review these recommendations and let me know how you'd like to proceed.

THE TWO THINGS NO ONE ELSE HAS

Persistence + memory.

↻ Restart the whole system → **memory intact, no replay.**

? Ask “why did we flag the MRR drop?” → **answered from memory, months later.**

This is the litmus test, passed.

REAL, NOT SCRIPTED

It actually detects — nothing is hardcoded.

The Metrics watcher derives MRR itself and catches a real drop.
